

NEW SOUTH WALES.

MONTHLY SUMMARY OF BUSINESS STATISTICS.

No. 34. FEBRUARY 23, 1934.

Issued by T. Waites, Government Statistician.

INDEX OF WHOLESALE PRICES (SYDNEY).

Average for year 1911 = 100.

All prices are in Australian currency. The indexes for recent months are shown in table ²⁴ on page 11 of this summary. The footnotes to that table apply also to this graph.

Copious rainfall has created exceptionally favourable seasonal conditions over practically the whole of the State.

2. WOOL.

It is anticipated that the total production of wool in New South Wales for 1933-34 will be approximately 464,000,000 lb., as compared with a record total of 532,090,000 lb. in 1932-33.

Excellent clearances have been made at auctions, and the main selling season in Sydney closes on 7th March.

* Including carry over from previous season.

The course of wool prices is shown in Table 24. The average price realised for greasy wool sold at Sydney auctions in the seven months ended January, 1934, was 15.6d. per lb., as compared with 8.5d. per lb. in the corresponding period of 1933.

Prices have declined over the course of the last month, but are still 96 per cent. above the average of the past three seasons.

3. WHEAT.

Pending final returns the interim total of the crop harvested in the State in 1932-33 is estimated at 78,389,000 bushels. The estimated area sown with wheat for grain and hay in New South Wales in the season 1933-34 was 4,838,000 acres. The carry-over of wheat and flour in stocks in New South Wales as at 29th November, 1933, is estimated at 5,900,000 bushels compared with 2,640,000 bushels at the corresponding date in 1932, and an average of 5,300,000 bushels in the three preceding seasons.

The course of wheat prices is shown in Table 24. Comparatively small sales have been effected to date on account of the weakness of the market and small volume of inquiries. Continued lag in exports is anticipated in the immediate future.

4. BUTTER.

The production of butter in 1932-33 was a record, which appears likely to be exceeded in the current season. Production in New South Wales in December, 1933, was the highest recorded for any month, and exceeded by nearly 2,000,000 lb. the previous record established in November, 1933.

The course of butter prices is shown in Table 24. After a collapse extending from September, 1932, to April, 1933, the London butter market revived temporarily, but collapsed again in October, and weakened until December, 1933. Prices have since fluctuated at a very low level. Export sales parity (Sydney) on 15th February, 1934, was 69s. per cwt. compared with 80s. per cwt. a year previously.

5. COAL.

The quantity of coal raised in 1933 is estimated by the Department of Mines to be 7,065,000 tons compared with 6,784,000 tons in 1932 and 6,432,000 tons in 1931.

* State Government banking transactions suspended. Index not ascertainable.

† Exclusive of certain abnormal Government transactions.

Following on a special research, the index has been revised throughout in order to eliminate the effects of Treasury Bill and other special transactions on behalf of Governments and the effects of bank amalgamations. The amounts of clearings shown are the recorded totals less Treasury Bill transactions only.

The index may be regarded as an approximate measure of changes in the volume of business transactions settled by cheques provided it is considered in conjunction with changes in price levels. The index represents the ratio of each month's clearings to the average for the month concerned during the five years 1926–1930. This average is represented by 100 each month. Seasonal fluctuations have thus been eliminated. Casual fluctuations in monthly index numbers have been smoothed out by taking a three months' moving average, that is, the index shown above for each month is the average of the actual index of that month and the preceding two months. It may be compared vertically or horizontally.

No adjustment has been made for normal growth or change of price levels.

1934	1,397,758	1,320,492

* Including new mortgages and renewals as registered.

The above comparison is affected by a decline in property values. Figures for individual months are shown in Table 50 of the Statistical Bulletin of New South Wales for December Quarter, 1933.

NOTE.—Mortgages and liens in some instances secure fluctuating advances, the amount of which is not recorded in the legal instruments. The amounts shown relate substantially to mortgages of fixed amounts for fixed periods, and exclude fluctuating advances (such as overdrafts) secured by mortgage. Mortgages providing collateral security of subsisting mortgages are included.

Changes in the volume of employment in retail trades are indicated in Table 10.

22. STOCK EXCHANGE INDEX (SYDNEY).

The following index of the values of the principal Company shares on Sydney Stock Exchange embraces the ordinary shares of companies (excluding banking companies) whose business is conducted wholly or largely in New South Wales.

The prices of individual shares are unweighted, and the group averages are the means of the average monthly prices per £ of paid-up capital. The aggregate index is the average for the whole of the shares included in the groups with the addition of 24 miscellaneous shares. It represents the ratio of the average prices of ordinary shares to their par values.

Par Value of Shares = 100.
